OPENCLASSROOMS

Hello Sinta,

Harshit Tyagi has validated your project. Well done! You did a great job!

Here are their comments:

Project skills

Based on the project's assessment criteria, define skill acquisition status and comment as follows:

Validated - The deliverables are complete and meet the required standards.

1. Develop a full JavaScript application according to a specification

Validated

Comments: the JS application is successfully working with all the following required features:

- the user is geolocated

- the user can add reviews to existing restaurants

- the user can add new restaurants

- a new restaurant can be added and a filter can be applied to select the restaurants with scores between a range.

2. Debug an application using DevTools

Validated

Comments: She made good use of devtools to debug the application and get everything to work as expected.

3. Use an external API in JavaScript

Validated

Comments: Sinta used the google maps API for rendering the map, markers, restaurants and showed good knowledge of how it worked.

Deliverable

Strong points: She has got a good understanding of how to work with external APIs.

Areas of further improvement: She can work more on the UI of the application to make it more attractive and read more about React best practices.

Presentation

Feedback: Commendable work with an equally good understanding of the underlying concepts.

Keep going Sinta you're on the right track!

Keep going Sima, you're on the right track!

Best regards,
The OpenClassrooms Team
